Due to continued success, Roush is undergoing an exciting period of growth across many domains. We have a current opening for a **Tooling Engineer/Tooling Program Leader** who will be responsible for managing all facets of the mold construction process, including: cost estimating, feasibility, project planning and reporting, customer liaison, reviewing and facilitating design, manufacture and validation of injection mold tooling to meet customer standards. **The position will be located at our Farmington, MI facility.**

Your Role:

- Interacts with Roush account management to ensure timely and accurate delivery of cost estimates for new and existing jobs. Provides technical assistance to the sales group where applicable.
- Proactively leads project feasibility activities internally/externally to ensure product and tool designs are optimized.
- Acts as project leader to ensure robust planning and reporting of all critical project activities to team members.
- Ensures that projects are efficiently managed and meet or exceed all timing, quality and budgetary expectations.
- Reports on all critical project issues regularly to department management and to the customer.
- Brings an entrepreneurial work ethic and proactively engages in continuous improvement efforts that foster an ever increasing competitive advantage in the mold construction and departmental business processes.

Requirements:

- Journeyman Mold Maker, Mold Designer or equivalent with a minimum 15 years of experience in the injection mold making industry.
- Possess thorough understanding of every aspect of the mold manufacturing process, including: reading and interpreting customer mold standards and expectations, facilitating and leading mold design process, including design reviews.
- Previous experience planning, directing and following manufacturing activities such as: machining operations, assembly operations and mold functional validation events.
- Capable of leading engineering feasibility events to ensure that all critical product design issues are identified and resolved for optimizing mold design, manufacturability, and process capability.
- Demonstrated success in both analytical and creative problem solving skills. Objectively defines problems, collects and interprets data and draws conclusions that are technically and economically sound.
- Demonstrated high-level of interpersonal skills required to effectively interact with all levels within an organization.
- Proficient in MS Office products in particular Excel, Word, PowerPoint and Project.
- Highly organized and efficient in developing and reporting project critical elements (i.e. open issues, project timing plans, budget variances, etc.) to management, internal and customer teams.
- Willing to travel up to 25% throughout North America and overseas.
