

We have one goal — improving the noise and vibration quality of our customers' products. Roush delivers innovative, effective noise and vibration control products and solutions. By combining advanced analysis capabilities, comprehensive engineering services, and state-of-the-art facilities, Roush has become a proven partner in identifying and resolving challenging noise and vibration issues. Backed by the diverse capabilities of the Roush family of companies, we are uniquely equipped to provide turnkey noise and vibration solutions.

Sound Absorption Metal – RA480

Product Description

RA480 is an absorption treatment made from perforated metal. The metal is perforated using a patented process to have the optimum flow resistance for sound absorption when it is installed with an air gap. RA480 can be manufactured from steel or aluminum and is available in a variety of thicknesses and finishes.

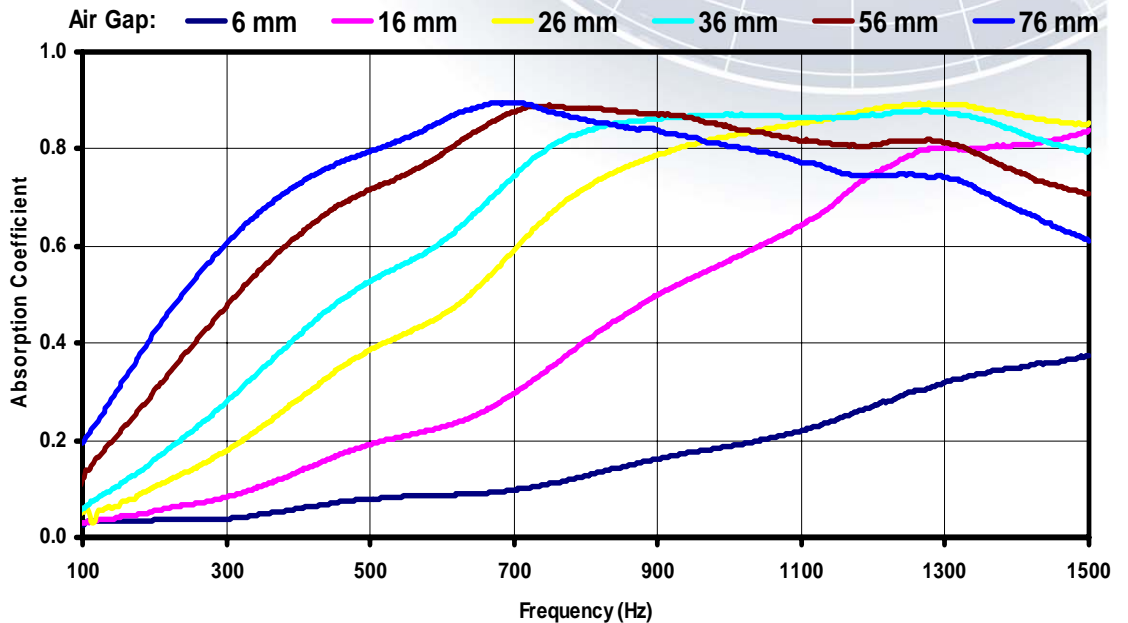

Features

RA480 provides the following unique performance advantages:

- Excellent sound absorption
- Combustion and heat resistance
- Resistance to heat build-up
- Dual functionality – sound absorbing heat shields and heat sinks
- Superior weather, corrosion and chemical resistance

ASTM E1050 Normal Incidence Absorption w/ Air Gap

Roush. Your Silent Partner.
